Summary

AI/ML enthusiast and Computer Science Engineering student with hands-on experience in data analysis, machine learning, and full-stack application development. Skilled in Python, data preprocessing, exploratory data analysis (EDA), feature engineering, and building data-driven solutions using Scikit-learn. Experienced in developing end-to-end applications with FastAPI, React, and PostgreSQL. Currently expanding knowledge in Generative AI, Large Language Models (LLMs), and intelligent data systems while building practical AI-powered projects.

Education

East Point College of Engineering and Technology <i>Bachelor of Engineering in Computer Science</i>	2022 – 2026
Vijaya Integrated PU College <i>PUC — Science Stream</i>	2020 – 2022

Projects

AI-Powered Data Analytics Assistant <i>Machine Learning + LLM Integration + Full-Stack</i> (GitHub)	2025
--	-------------

- Developed an AI-powered analytics platform for automated data cleaning, exploratory data analysis (EDA), and insight generation from structured datasets.
- Implemented data preprocessing workflows including missing value handling, feature engineering, data transformation, and visualization generation.
- Built machine learning workflows using Scikit-learn for predictive analytics, trend analysis, and data-driven decision support.
- Integrated natural language query capabilities using LLMs to enable conversational interaction with datasets and automated report generation.
- Designed and developed a FastAPI backend with a React dashboard for interactive analytics, visualization, and reporting.
- **Tech Stack:** Python, Pandas, NumPy, Matplotlib, Scikit-learn, FastAPI, React, PostgreSQL, Plotly, Ollama

ScamShield — Multilingual UPI Fraud Detection System <i>NLP + Machine Learning + System Design</i> (GitHub)	2025
--	-------------

- Built a multilingual fraud detection system for identifying phishing SMS messages and malicious URLs targeting UPI users across multiple Indian languages.
- Utilized transformer-based language models for multilingual text classification and suspicious message detection.
- Developed a browser extension to detect and warn users about potentially malicious URLs before navigation.
- Designed FastAPI services for real-time prediction, URL scanning, and fraud risk assessment.
- Implemented a hybrid detection approach combining machine learning predictions with rule-based URL analysis techniques.
- **Tech Stack:** Python, Transformers, FastAPI, JavaScript, ONNX Runtime, MLflow, Twilio

Technical Skills

Languages: Python, JavaScript
Data Science & ML: Pandas, Matplotlib, NumPy, Seaborn, EDA, Scikit-learn
Databases: PostgreSQL, Oracle SQL
Frontend: HTML5, CSS3, React.js
Tools: Git, GitHub, Postman, VS Code

Languages & Extracurriculars

Languages: English, Kannada, Hindi
Leadership: Trek Lead, Project Lead, Football Team Captain
Competitions: Cardano Hackathon Asia 2025 (Selected Participant)
